

AVIPOINT™ P32

Bird Activity	Pigeons - Daytime perching, night-time roosting and some nesting areas Starlings - Daytime perching and night-time roosting. Place at least three strips together with wires overlapping
Infestation	Heavy pressure areas
Where to Use	Most building ledges
Protects Area	Up to 265mm
Base Width	45mm
Distance Between Wires	21mm
Height	139mm
Distance Between Outer Spike Tips	200mm

Code	Description	Pack size
AVI130	AVIPOINT P32	50m carton
AVI130A	AVIPOINT P32	5m stack

AVIPOINT™ G20

Bird Activity	Gulls - Daytime perching, night-time roosting and some nesting areas
Infestation	Up to heavy pressure areas
Where to Use	Most building ledges
Protects Area	Up to 375mm
Base Width	45mm
Distance Between Wires	33mm
Height	166mm
Distance Between Outer Spike Tips	175mm

Code	Description	Pack size
AVI140	AVIPOINT G20	50m carton
AVI140A	AVIPOINT G20	5m stack

Gull spikes have longer wires than pigeon spikes as Gulls have longer legs and can stand astride pigeon spikes. Gulls are also very strong. If they can land nearby and walk up to the spike system, they are capable of ripping them out with their beaks. Therefore the installations need to prevent the birds from landing adjacent to areas being protected. Also AVIFIX adhesive (available in white or grey) should be used to ensure greater adhesion.
